AraSim Results

Antenna Model	Curved Sides	Straightened Sides	Original Bicone	Paper Antenna
Total Events	2985982	3000000	3000000	3000000
Triggered	40108	36474	36510	41014
Usable	40091	36459	36496	40994
Weighted	16010.76133	14367.39220	14281.51762	15649.63764
Effective Volume	5.71542	5.10482	5.07431	5.56040
Effective Volume Error	±0.035	±0.028	±0.032	±0.029

- Note: The following plots are of the cosine of the angle of the received radio frequency, θ_{rec}
- θ_{rec} results from the conic shower of Askaryan radiation produced by the neutrino in ice
- θ_{rec} is measured with respect to a vertical axis

3000000

- Note: The following plots are of the cosine of the angle of the incoming neutrino, $\cos \theta_{\nu}$
- θ_{ν} represents the angle of the trajectory of the neutrino before interaction when measured with respect to a vertical axis

3000000

3000000

- Note: The following plots are beam patterns for the straightened sides antenna
- In these plots, 0 degrees is on the right and refers to pointing directly up when the antenna is oriented correctly

100 MHz Beam Pattern

200 MHz Beam Pattern

300 MHz Beam Pattern

400 MHz Beam Pattern

500 MHz Beam Pattern

600 MHz Beam Pattern

700 MHz Beam Pattern

800 MHz Beam Pattern

900 MHz Beam Pattern

1 GHz Beam Pattern
